

# The Intelligencer.

OFFICE: No. 15 Quay Street.  
THURSDAY, SEPT. 11, 1873.

A DAILY PAPER AT ST. CLAIRVILLE, PA.—Mr. Ashenbush, the live editor of the *Marion's Ferry News*, proposes to issue a daily edition of the *News* at St. Clairville during the approaching Fall. The printing of the paper on the ground will be a novelty, and it will no doubt have a wide circulation among an excellent class of people, the substantial farmers and their wives and daughters—just such people as the wide awake merchant finds to be the best customers. To help the expense, Mr. Ashenbush will solicit a few advertisements from the merchants of Wheeling, and we should think they would find it pay them to invest something in advertising at this fair through the columns of the *News*.

GOVERNOR POWERS, of Mississippi, recently gave his autograph to a lady who requested it at a Republican meeting at Macon, and it was made to do duty as the signature to a pardon for a young man serving out a term in the penitentiary, son of the autograph seeker, and succeeded in getting him out of the way before the trick was discovered.

The *Telegraph* says more new buildings have been erected in Charleston this year than during any year since the war. It says there are about two thousand inhabitants within the corporation and probably an equal population in suburban villages outside, but within a mile or two of the corporate limits.

A CITIZEN of Washington, Pa., offers to donate two acres of land within the borough limits to any company or person who will locate a manufactory on it that will employ a hundred hands.

Mr. JAMES BURKE, an old citizen of Fairmont, who had an elegant country place within a mile of town, has sold out and removed to Peoria, Ill.

It cost \$52,000,000 to run the city of New York the past year. At that rate they had better recede TWEED. He would undertake to do it for less, no doubt!

The colored people of Washington, Pa., are raising money to build a new church edifice.

FAIRMONT.

The Mountain City—Marion County Fair—Attendance, Amusements, &c.

(From Our Special Correspondent.)

Under the careful guidance of Captain Dan, Everette, we left Wheeling on Monday morning at 11 o'clock, arriving at 'Mountain City' near FAIRMONT, about half past three in the afternoon. Here live about 3,000 people, engaged principally in manufacturing pursuits. We saw many antiquated as well as dilapidated structures, but there are numbers of more modern edifices in course of erection. There is a fine Normal School here; and a three story building, to cost fifteen thousand dollars, with town hall on third floor, is in course of erection. Mr. B. F. Swisher, dry goods merchant, has just completed a very fine building; and Messrs. Ridgely & Fleming, also in the dry goods line, will remove to a new and commodious room in a few weeks. Our first impression of Fairmont, in brief, is: citizens full of business; streets full of rocks; and a town full of pretty girls.

THE FAIR.

The attendance at the Fair is not as good as usual, but a crowd is expected this afternoon and to-morrow. The exhibition of stock is finer than last season. Fairchild, Leavhead & Co., of Morgantown, have a fine display of carriages. With this exception, the exhibition outside of Floral Hall amounted to very little. As the Judges were in consultation in this hall when we applied for admission, we are ignorant as to its contents, but understand that the collection of musical instruments exhibited by W. H. Sheib & Co., of Wheeling, was the principal attraction.

A GRAND TOURNAMENT takes place this afternoon. The following is a list of Sir Knights, etc.: John Hamilton, Knight of the Temple; Henry Morrell, Ivanhoe; Wm. Meredith, Red Gauntlet; J. M. McCoy, White Plume; Dr. Morrill, Waverley; Joseph Koon, Flying Cloud; Ezra Allen, Fairmont; David Ridgely, Lions Star; Thomas Hall, Harney; J. Partridge, I Don't Care; G. W. Parish, Worthington; E. L. Compiton, Knight Before Last; Wm. N. Radcliff, Lost Cause; W. E. Hood, Indian Chief; Marshall, J. P. Carr, J. K. Beekle, Col. A. Rieming, J. W. Scott. The address to the Knights will be delivered by James B. Morrow, Jr., the Crown address by A. B. Fleming. George H. Shinn is the clown.

PERSONAL.

We noticed the following Wheeling gentlemen in town: Messrs. J. B. Toney, Register, John D. Reynolds, John C. Roy, Dr. Reeves, Henry Hartman. HAZARD.

Horrible Accident—Boiler Explosion—Two Men Blown to Atom.

A terrible explosion occurred on Saturday about 8 o'clock in the afternoon, at a portable saw mill, situated three miles from the town of Capitan creek, near Cole's mill, resulting in the death of two men named Douglas and Simmons. Having only four rods to saw, it was thought there was enough water in the boiler to make the run, but afterwards it was ascertained that such was not the case and an attempt was made to turn cold water which produced the explosion, bursting the boiler. Douglas, who was part owner of the mill, had his head blown off and one leg entirely severed from the body and thrown some distance into a heap of brush.

Simmons, who was possibly the engineer, was literally blown to atoms, so that it was impossible to find but fragmentary parts of his body.—*Baltimore Chronicle*.

JOHN ANKON has had a second attack of illness since his return from Deer Park; and although he expects to reside at the Court to be held next week, some of his friends are afraid that he will overtake himself.—*Washington Reporter*.

We have received another communication from Hon. B. W. Byrne stating that he never received an order from Mr. Foster for tickets for his individual use.—*Kingwood Journal*.

## THE BALLOON VOYAGE.

Sketches of the Daring Aeronauts. (From the Graphic.)

PROFESSOR JOHN WISE was born in Lancaster, Pa., on the 24th of February, 1808. At an early age he was sent to the German Grammar School of his native place, and afterwards graduated at the High School. From his earliest youth Professor Wise was imbued with a desire, or, as he himself expresses it, a "longing to float among the clouds." He would sit for hours watching the birds, and wishing for wings like theirs with which to ascend into space. When only fourteen years of age, he began his principal avocation, and for a long time his principal amusement consisted in constructing and sending up kites and balloons. Indeed, anything that would give him pleasure, a cabinet-maker, and for some time he worked faithfully at his trade. He years ago, however, of ballooning, however, and a day seldom passed in which he did not make some new experiment, some novel attempt, in this his only pastime.

Professor Wise's first ascension was made in Philadelphia some forty years ago. At that time he was twenty years of age. He made the ascent alone in a balloon constructed by himself, and was successful in every way. He passed over the city twice, first from east to west, and then, ascending higher, from west to east. He landed in safety nine miles east of the city. Soon after this ascension he became acquainted with Professors Eddy and Henry, from whom he received many valuable hints. A few years after his first ascent the Professor determined to penetrate into a storm cloud. He wrote to Professor Henry upon the subject, and in reply he received a letter from him, in which he was told that it was not feasible, and that the attempt would be dangerous.

The reply was favorable, and since then Professor Wise has sailed for upwards of a hundred miles in the midst of thunder clouds, and always without accident. In the course of this remarkable man's most eventful career, he has made no less than four hundred and forty balloon ascensions. Of these his memorable voyage from St. Louis to New York is most notable. From early manhood, Professor Wise has been determined to attempt the crossing of the Atlantic in a balloon. He has lived with one object in view. He has endeavored to accumulate funds, which he has made use of in his experiments, which he has made use of in his experiments, which he has made use of in his experiments.

At a certain height a current of air exists which is constantly moving from west to east, is beyond dispute; that Professor Wise is in every way master of his profession is not to be doubted; that he will be furnished with every means that money can secure is already assured.

MR. W. H. DONALDSON.

Washington H. Donaldson was born in Philadelphia April 7, 1840, of Quaker parentage. Very early in life he struck out for himself, and in 1857 studied the business of amputating with his father, one of the first artists in that line in his native city. In 1859 he was engaged in a photographic establishment in this city, and afterwards learned the art of engraving on stone. But his health failed under the confinement of these pursuits, and he was obliged to seek outdoor exercise and business. From early childhood he had conceived a strong liking for gymnastic exercises, and in 1861 he secured an engagement as a teacher in this line, and met with great success. A few years ago he determined to turn his attention to the practice of medicine, and accordingly made his first ascent at Reading, Pa., August 30, 1871. Since that time Mr. Donaldson has made more than thirty trips, many of them being of a very exciting character.

In person Mr. Donaldson is of medium height, dark complexion, black hair, and eyes, and possesses a superb physique. He is temperate, abstemious, and abstains from all intoxicating drinks, even to tea and coffee. He neither smokes nor chews tobacco, saying, "I am determined to have my full share of the pleasures of life, but I will not let them interfere with my health and business." He is temperate, abstemious, and abstains from all intoxicating drinks, even to tea and coffee. He neither smokes nor chews tobacco, saying, "I am determined to have my full share of the pleasures of life, but I will not let them interfere with my health and business."

Next summer he has something for the Sea to notice. I shall show the people that the ocean can be crossed by balloon, and that I can do it. In the *World* of June 7, another interview was published, in which Mr. Donaldson said: "During the month of March one hundred vessels were lost and eight times as many lives were discovered some safe, quick, and comfortable transit across the Atlantic, and this is just what Professor Wise and I intend to do." In a letter to the editor of the *Boston Globe*, published June 5, Professor Wise writes: "The balloon has been chosen to notice. I shall show the people that the ocean can be crossed by balloon, and that I can do it. In the *World* of June 7, another interview was published, in which Mr. Donaldson said: "During the month of March one hundred vessels were lost and eight times as many lives were discovered some safe, quick, and comfortable transit across the Atlantic, and this is just what Professor Wise and I intend to do."
